Table Schema

1. Menu Items Table

Column Name	Data Type	Description
ItemID	INT (PK)	Unique identifier for menu item
ItemName	VARCHAR	Name of the dish
Category	VARCHAR	e.g., Starter, Main, Dessert, Beverage
Price	DECIMAL	Price of the item
Availability	BOOLEAN	Whether item is available

2. Customer Orders Table

Column Name	Data Type	Description
OrderID	INT (PK)	Unique order identifier
CustomerID	INT (FK)	Links to customer table
TableID	INT (FK)	Links to table bookings
OrderDateTime	DATETIME	When order was placed
Status	VARCHAR	e.g., Pending, Served, Completed

3. Order Details Table (junction between orders & menu items)

Column Name	Data Type	Description
OrderDetailID	INT (PK)	Unique identifier
OrderID	INT (FK)	Links to customer orders
ItemID	INT (FK)	Links to menu items
Quantity	INT	Number of items ordered
Subtotal	DECIMAL	Price × Quantity

4. Bills Table

Column Name	Data Type	Description
BillID	INT (PK)	Unique bill identifier
OrderID	INT (FK)	Links to customer orders
TotalAmount	DECIMAL	Final bill amount
PaymentMethod	VARCHAR	e.g., Cash, Card, UPI
PaymentStatus	VARCHAR	Paid / Pending

5. Table Bookings Table

Column Name	Data Type	Description
TableID	INT (PK)	Unique table identifier
CustomerID	INT (FK)	Links to customer table
BookingDateTime	DATETIME	Reservation time
Seats	INT	Number of seats booked
Status	VARCHAR	Reserved / Occupied / Cancelled

6. Customers Table

Column Name	Data Type	Description
CustomerID	INT (PK)	Unique customer identifier
Name	VARCHAR	Customer name
Phone	VARCHAR	Contact number
Email	VARCHAR	Email address
LoyaltyPoints	INT	Reward points

SQL Questions

1. List all menu items.
2. Show names and emails of all customers.
3. Find all table bookings with status 'Reserved'.
